Anaconda installation

1. Click on the link below to open the website of anaconda:
https://www.anaconda.com/
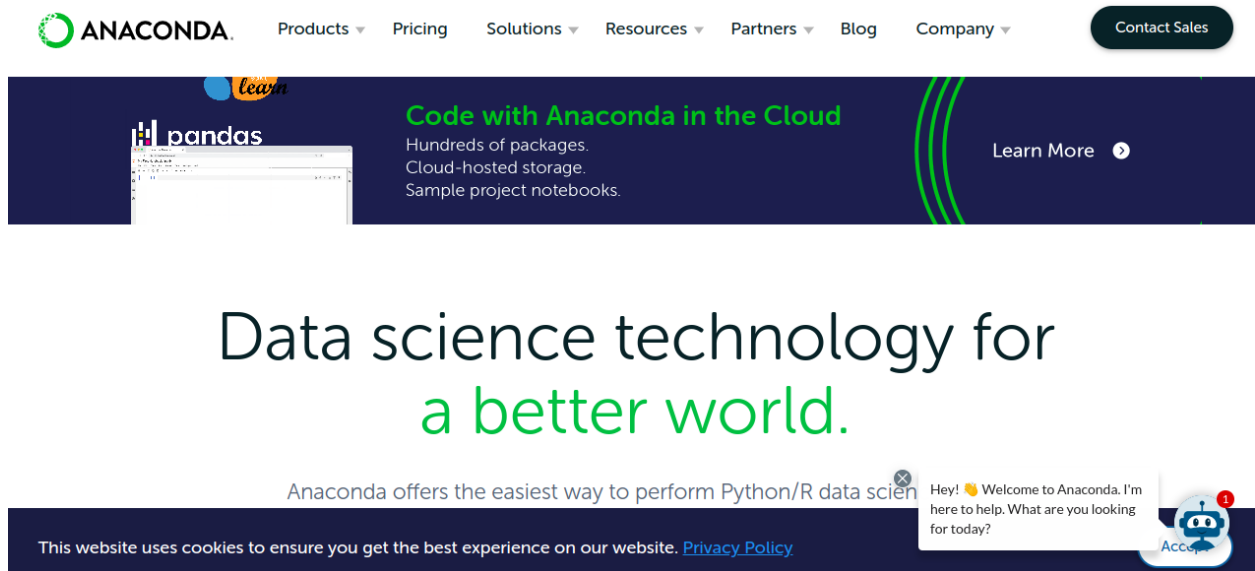

2. Go to the "Products" option present in the top row.
3. Click on the "Download" button to start download.
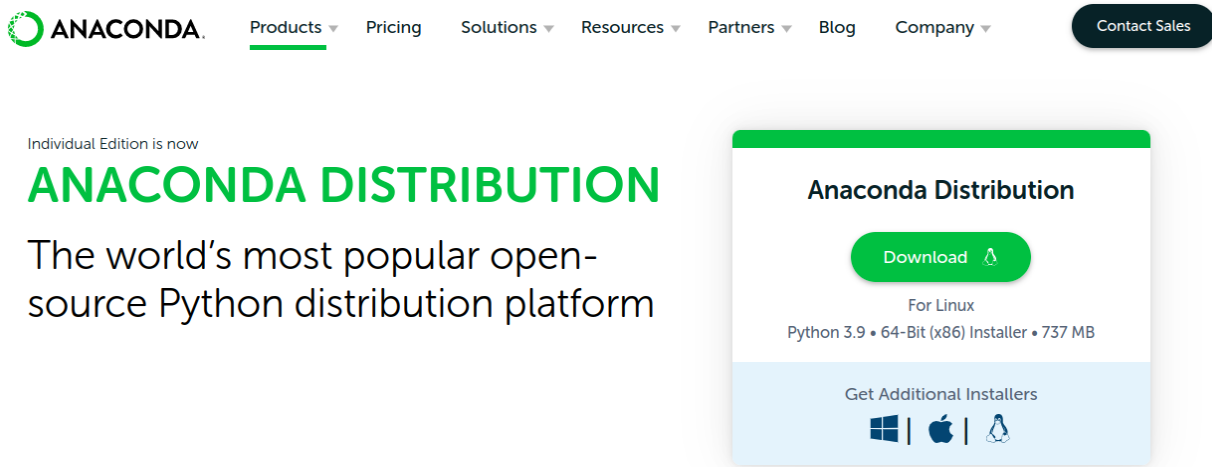

4. Once download is complete, click the installer to launch.
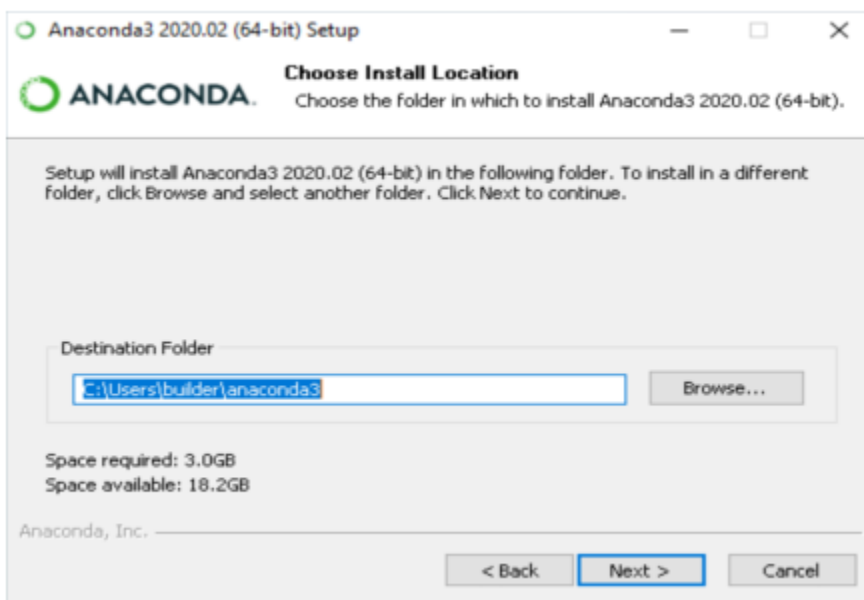

5. Click on "Next".

5. Read the license agreement and click on "I Agree".

6. Select installation type "Just Me" unless you're installing it for all users (which require Windows Administrator privileges) and click on Next.

7. Select a destination folder to install Anaconda and click the Next button.

8. Choose whether to add Anaconda to your PATH environment variable. We recommend NOT adding Anaconda to the PATH environment variable, since this can interfere with other softwares. Instead, use Anaconda software by opening Anaconda Navigator or the Anaconda Prompt from the Start Menu

Choose whether to register Anaconda as your default Python. Unless you plan to install and run multiple versions of Anaconda or multiple versions of Python, accept the default version and leave this box checked.

9. Click the Install button.
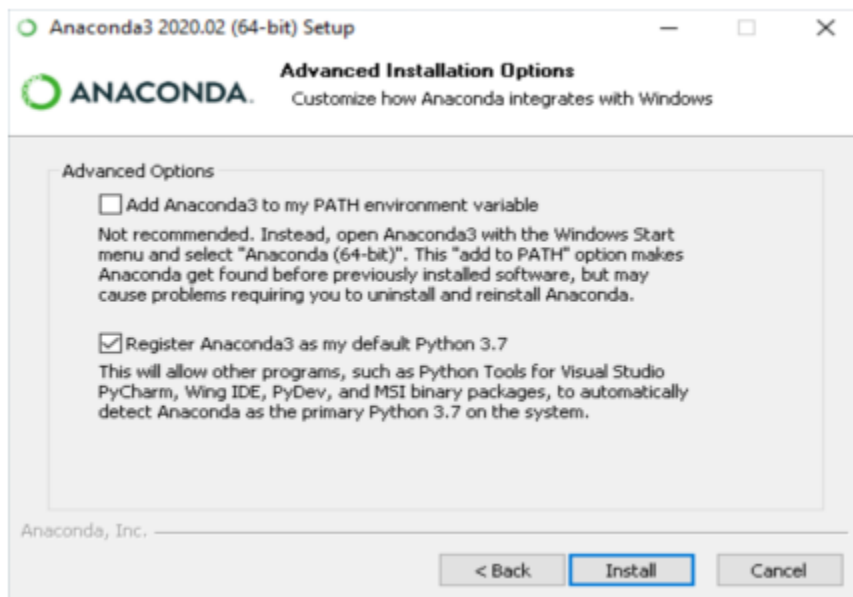

10. Click on the Next button.
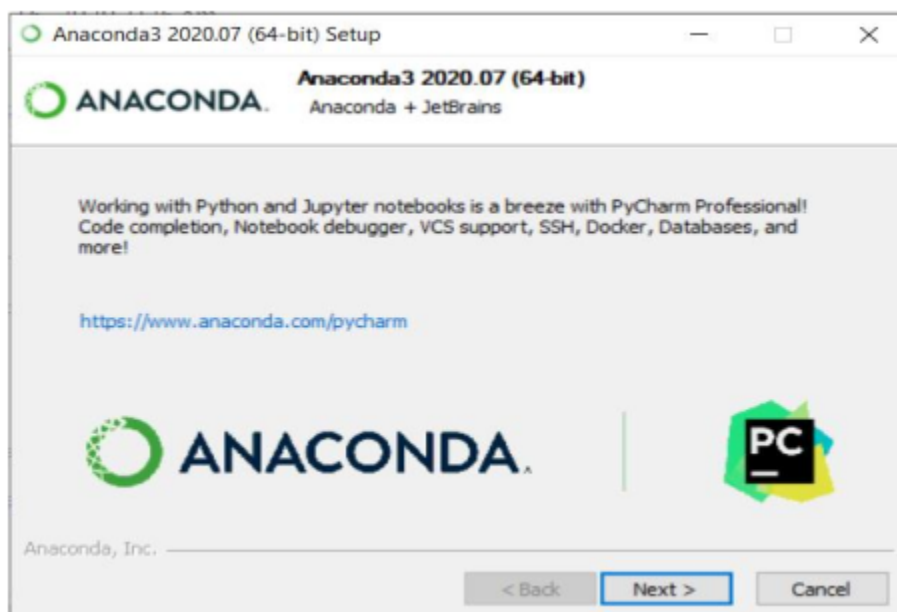

11. And then click the Finish button.
